About us

From UK origins, more than 100 years ago, the **DUNLOP** brand name has established itself with an enviable reputation for high quality products.

This catalogue illustrates our standard range of products manufactured for commercial applications, 25% of our total production is for specialist items to suit individual customer requirements, so please do not hesitate to contact us to discuss your own application.

Dunlop products are now at the forefront of a highly competitive and specialist industry, covering a vast spectrum of applications such as Automotive, Agricultural, Construction, Industrial, Medical and Recreational.

Quality

The reputable standard of our products is the result of a consistently pursued quality policy influencing every area of our company. Not only from the arrival of raw materials through to the delivery of the finished products, but also from the receipt of your enquiry through to invoicing. Our staff are experts in their field and will assist in every way possible to meet your full requirements, deadlines and expectations.

Dunlop products are manufactured to internationally recognised standards and tolerances using top quality materials and workmanship.

UKAS approved manufacturer to ISO 9001:2008 and ISO 14001:2004.

Facility

Our European Distribution Centre is based in Ashford, Kent, UK, extends to over 66,000 square feet (6,131 square meters), comprising of Administration, Warehousing and Production facilities. Our stock range of products is now one of the largest found anywhere in Europe and covers more than 100 product lines and over 50,000 individual components.

Dunlop products are manufactured in the UK, throughout Europe and Asia.

Environment

As a leading manufacturer, Dunlop takes its environmental responsibility very seriously. Being a socially responsible manufacturer, promoting waste recycling, energy efficiency and supporting local businesses wherever possible to help reduce our impact on the environment.

Our factories aim to eliminate pollution releases and promote high standards of energy and waste management. Standard product ranges are designed for maximum energy efficiency. Our level of environmental commitment remains ahead of the industry trend. UKAS approved to ISO 14001:2004.

Customer Commitment

The entire Dunlop product range is backed with a comprehensive line of support services, including on-going product application research and development, full technical and customer service support, the latest in lean manufacturing techniques and scheduling, state of the art production machinery and quality control procedures, with an intense focus on the requirements and expectation of our customers.

“We are proud to be a European manufacturer, it is a privilege to supply our products to many of the World’s most prestigious original equipment manufacturers as well as Europe’s leading after market distributors.”

Ray Mifsud, Managing Director

“Our commitment to our staff, our customers and the environment is of paramount importance to our company, we will continue to develop our organisational skills to further enhance our companies potential, to engage in sustainable practices and anticipate the needs and expectations of our customers.”

Ray Mifsud, Managing Director

FACILITIES

European Distribution Centre, Ashford, Kent UK

Dunlop, is proud to be a committed European manufacturer of Bearings, Transmissions and Linkages. We believe in the future of European manufacturing and will continue to focus and further enhance the requirements and expectations of our customers globally.

V & WEDGE BELTS INTRODUCTION

DUNLOP V & WEDGE BELTS are manufactured in a polybutadiene compound. High variety of belt size availability permits the application of **DUNLOP V-BELTS** on all types of industrial equipments.

Applied technology allows good dimensional precision in the manufacture of **V-BELTS** to make them suitable for multiple transmissions. This dimensional stability continues also during belt use. V & Wedge Belts are developed with high resistant tensile elements, they are characterised by high performances, length stability during belt life, conductivity, oil and heat resistance. Wedge Belts are particularly suitable for centrifugal pumps, compressors, tool machines, generators, high power mills and stone mills and offer a good balance between price, performance and quality. They represent an affordable solution for transmission systems of all industrial sectors.

DUNLOP V & WEDGE BELTS offers the following features:

MECHANICAL FEATURES

- Smooth starting and running
- Wide range of driven speeds, using standard electric motors

- Low maintenance
- Highly efficient
- No need for lubrication
- Extremely wide horsepower ranges
- Dampen vibration between driver and driven pulleys
- Silent operations
- Long service life
- Easy installation
- Reduction in drive dimension

CHEMICAL FEATURES

- Working temperature range -30°C to +80°C
- Resistance to oil and heat
- Antistatic properties to ISO 1813

Special construction are available on request.

AGRICULTURAL V-BELTS

DUNLOP Agricultural V-Belts have been created for drives with small pulley diameters and high temperature peaks, combined with a high grade of moisture and humidity. They withstand the harshest environmental requirements such as oil and grease contaminated drives of transmissions where grits may interfere between pulleys and belt. Thanks to its characteristics Agricultural V-Belts perfectly match the requirements of clutching drives as the aramid cords protect the belt against shock loads while maintaining its length constant.

The rubber compound is specially designed for long lasting power transmissions working under hardest conditions. Belt cover uses latest technology in materials for a high resistance in clutching transmissions. Agricultural V-Belts are being used successfully in applications such as: Lawnmowers - Snow blowers - Garden equipment - Garden tractors, etc.

V-BELTS WRAPPED

Description

Traditional V-Belts are manufactured with cross-sections Z, A, B, C & D sections with a range of over 500 lengths currently available.

V-Belts for industrial use are designated both to RMA standard e.g. A52, where the letter designates its cross-section and the number corresponds to a nominal internal length in inches and to DIN standard e.g. 13x1320Li, where the first number denotes the width in mm, and the second number is the internal length in mm.

Dunlop V-belts have specially treated jackets to give superior anti-static, heat and oil-resistant properties and are static conductive to ISO1813.

Longer belt lengths are available

V & WEDGE BELTS

V-BELTS RAW EDGE COGGED

Description

Energy saving, higher performance thanks to their flexibility. Dunlop raw edged cogged belts with a higher performance level, have a longer service life. Special designs with raw edges that allow higher slipping resistance even when they are working with low installation tensions.

Maximum resistance to the action of heat and oils. High antistatic properties conforming to ISO1813.

Part numbers are identified by 2 letters (e.g. AX) the belts cross section and a 2 or 3 digit number (e.g. 50) which represents the belts length in inches. AX50 etc.

V-BELTS AUTOMOTIVE

Description

Energy saving, higher performance thanks to their flexibility. Dunlop Automotive V-belts with a higher performance level have a longer service life. Special designs with Raw edges that allow higher slipping resistance even when they are working with low installation tensions.

Maximum resistance to the action of heat and oils. High antistatic properties used in automotive applications and conforming to ISO1813.

Part numbers are identified by 3 letters (e.g.AVX) the belts cross section and a 2 digit number (e.g.10)the belts top width and a 3 or 4 digit number which represents the belts length in mm. AVX10x800 etc.

V-BELTS AGRICULTURAL

Description

3L, 4L & 5L cross section v-belts provide energy saving and high performance, a premium v-belt ideally suited for clutching application. Length stable kevlar corded (cotton covered) provides fewer take-ups and length adjustments. Longer life coupled with high heat and oil resistance.

AA, BB & CC cross section hexagonal v-belts are flexible in the direction of motion, rigid in transverse direction and designed for use in serpentine agricultural applications involving multiple pulley arrangements.

Dunlop hexagonal belts are identified by 2 letters stating their cross-section (e.g. AA) and by a number (e.g. 105) which represents the nominal pitch length in inches. AA105 etc.

V-BELTS VARIABLE SPEED

Description

Our range of Variable Speed V-Belts includes belts conforming to ISO R 1604, they are designated by e.g. the letter W followed by a number e.g. 16 which is the belts width in mm. This is followed by a number e.g. 500 which corresponds to the pitch length Lp in mm.

Belts not covered by the ISO standards are designated by a code consisting of a set of 3 numbers e.g. 22 which denotes the belts top width followed by e.g. 8 which denotes the belts thickness and e.g. 1000 which denotes the belts inside length Li in mm, therefore e.g. 22x8x1000.

V & WEDGE BELTS

V & WEDGE BELTS BANDED

Description

Banded V-Belts & Wedge Belts are sets of belts assembled together. Besides incorporating all of the features of standard belts, the belts are joined together to form a band gives the following additional features; no flapping during abrupt load variations, no possibility of turning over and are ideal in high vibration applications.

Part numbers are designated by letters standing for their cross-section, e.g. SPB followed by a number e.g. 2000 which specifies the belts pitch length, followed by e.g. /4 which specifies the number of bands.

V-BELT LINK BELTING

Description

V-belt Link belting offers a fast alternative to a V-Belt or Wedge Belt in an emergency break down situation, due to the ease in which the belts length can be adjusted to suit any application.

Also used as preferred belting product in applications where an endless belt can not be fitted without an expensive machine breakdown as it can be threaded into place and connected in situ without the need for shafts and bearings to be dismantled.

Part No.	Belt width (mm)	Belt Depth (mm)	V-Belt Section
Z-Link Twist Belt	10	6	Z
A-Link Twist Belt	13	8	A
B-Link Twist Belt	17	11	B
C-Link Twist Belt	22	14	C

DUNLOP V-Belt Link Belting is the ideal replacement substitute for conventional rubber V-Belts and offers a permanent or ideal temporary replacement for conventional rubber V-Belts. Dunlop V-Belt Link Belting combines superior strength, durability and quick, easy assembly to keep equipment up and running at the same running horse power ratings as rubber belts.

- Durable urethane coating precision machined sides for smooth engagement
- Rugged, woven polyester fabric for strength and longer belt life
- Dunlop urethane construction offers superior resistance to most common industrial solvents and chemicals, oil, water and extreme temperatures, from -25°C to 80°C
- Dissipates heat so they run cooler than conventional belts

INSTALLATION

Installation and assembly is as easy as a snap and a twist. No special tools are required to couple or uncouple each belt. Belts can be made to accommodate any length, which makes them ideal for emergency repairs and replacements. Once assembled, V-Link Belts are installed in a fraction of the time needed for endless rubber belts without removing bearings, motors or shafts.

They are suitable in harsh environments and are ideal for metal processing, machine tool, agricultural, packaging, coal and aggregate, pulp and paper, marine, air handling, petrochemical, woodworking, conveying and food industries, HVAC.

V & WEDGE BELTS

WEDGE BELTS WRAPPED

Description

Wrapped Wedge Belts are designated by letters standing for their cross-section, e.g. SPA followed by a number e.g. 1600 which specifies the belts pitch length L_p in mm. Due to their high power ratings savings can be made over classical V-Belts, smaller pulley diameters and reduced numbers of belts and be incorporated into more compact drives.

Wedge Belts are produced to BS3790, DIN 7753 and AFOR T 47-117 standards. They are manufactured in the cross-sections SPZ, SPA, SPB and SPC in a range of over 400 lengths.

V & WEDGE BELTS

WEDGE BELTS RAW EDGE COGGED

Description

Raw Edge Cogged Wedge Belts are high performance and are designated by letters standing for their cross-section, e.g. SPAX followed by a number e.g. 1600 which specifies the belts pitch length L_p in mm. They enable; resistance to repeated flexing, compact drives, reduced weight, cost savings, small pulley diameters and high drive ratios.

They are manufactured in the cross-sections SPZX, SPAX, SPBX and SPCX in a range of over 300 lengths and are static conductive to ISO1813.

V PULLEYS

V-PULLEYS TAPER BORE

Description

Dunlop V-pulleys are manufactured from cast iron EN-GJL-200 UNI EN1561 and are black phosphated according to ISO 4183 and DIN 2211-3 norms. All pulleys are statically balanced for peripheral speeds up to 35 m/sec.

V-Pulleys are available to suit all V & wedge belts cross sections Z, A, B, C, SPZ, SPA, SPB & SPC and are available from stock in both taper and pilot bore options.

Part numbers are identified by 3 letters (e.g. SPA) which represents the belt cross section, a 3 or 4 digit number (e.g. 250) the pulleys pitch diameter and a 1 or 2 digit number (e.g. 3) the number of grooves/belts to be run in the drive, for example SPA250/3.

V-PULLEY TYPES PILOT BORE

V PULLEYS

V-PULLEYS PILOT BORE

Description

Dunlop V-pulleys are manufactured from cast iron EN-GJL-200 UNI EN1561 and are black phosphated according to ISO 4183 and DIN 2211-3 norms. All pulleys are statically balanced for peripheral speeds up to 35 m/sec.

V-Pulleys are available to suit all V & wedge belts cross sections Z, A, B, C, SPZ, SPA, SPB & SPC and are available from stock in both taper and pilot bore options.

Part numbers are identified by 3 letters (e.g. SPA) which represents the belt cross section, a 3 or 4 digit number (e.g. 250) the pulleys pitch diameter and a 1 or 2 digit number (e.g. 3) the number of grooves/belts to be run in the drive, for example SPA250/3.

MICRO (POLY) V-BELTS

DUNLOP Micro V Belt combine high flexibility and the light weight of flat belts with the grip of V-Belts, this creates a high power rated special rib profile.

Micro V-Belts are endless rubber belts with longitudinal V shaped grooves. They transmit the motor power by friction from the driver to the driven side of a machine, giving the following advantages:

CONSTRUCTION AND FEATURES

- The top layer is fabric-reinforced resisting reverse bending and possible wear caused by a back idler.
- The specially treated high-strength tensile member withstands the stresses with reduced and stable elongation.
- The longitudinally ribbed high-grip elastomer base offers a large contact surface.
- Compact smooth running drive system with low vibration.
- Difficult drive configurations such as serpentine or twisted drives, can be designed due to the high flexibility.
- Good resistance to mineral oils and temperatures between -30°C and +60°C (+80°C for short periods).
- Suitable for environments of high humidity.
- Suitable for H, J, K, L and M pulley profiles as specified in DIN 7867 and ISO 9982 and are also suitable for pulley profiles as specified in RMA IP26 and ASAE S 211.5 standards.
- Meets ISO standard 1813 for static conductivity.

APPLICATIONS

For a given application, the belt is cut to the required number of ribs thus closely matching the required power rating. This makes it possible to obtain a unique, customised belt with optimum overall size.

The key qualities of DUNLOP Micro V belts are that for a given application vibrations are reduced and there is no need for the matching of sets.

PHYSICAL CHARACTERISTICS

	H	J	K	L	M
Centre distance P (mm)	1.60	2.34	3.56	4.70	9.40
Height Hs (mm)	3.0	3.5	6.0	9.5	16.5
Weight per rib (g/m)	5.9	8.4	20	30.9	124.1
Min. pulleys diameter (mm)	13	20	40	75	180
Min. reverse bend diameter (mm)	32	45	70	140	300

The belt code refers to the effective length in millimetres measured at the top of the pulleys, i.e. at the root of the belt ribs.

MICRO V-BELTS

MICRO V-BELTS

Description

High Performance Micro V-Belts in endless construction and with triangular ribs running along the length of the belt, the entire power is transmitted by a single belt.

Drives can be reduced in size when compared with traditional V-belt drives as smaller pulleys can be used that will transmit equal or higher loads thereby reducing space requirements and cost.

Higher ratios and increased belt speeds can also be achieved.

Part numbers are identified by a 3 or 4 digit number (e.g. 1321) which represents the nominal length in mm, a letter (e.g. J) the cross section and a 2 digit number (e.g. 08) the number of ribs. 1321J08 etc.

ENGINEERING DATA MICRO V-PULLEYS

Characteristics

Dunlop Micro V-pulleys are manufactured with extreme care and they do not show any superficial defect or tool traces. Every pulley is subject to dimensional controls in order to point out pitch tolerance of two grooves.

Advantages

Always one single belt used. That avoids any problem due to belt length differences. Low weight and space occupied. Very high transmission ratio. High power transmitted. High linear speed (up to 60m/s in "J" section). Low noise and vibration. No heating.

Materials

Steel for solid hub pulleys; cast-iron GG25 DIN 1691 for taper-bush pulleys (PYB).

**Groove dimensions and tolerances of Poly -V pulleys according to ISO 9982**

MICRO V PULLEYS

MICRO V-PULLEYS

Description

Dunlop micro V-pulleys are manufactured from cast iron EN-GJL-200 UNI EN1561 and are black phosphated according to ISO 9982 norms. All pulleys are statically balanced for peripheral speeds up to 35 m/sec.

Micro V-Pulleys are available in both 'J' & 'L' cross sections and are available from stock in both taper and pilot bore options.

Part numbers are identified by 3 numbers (e.g. 100) which represents the pitch circle diameter, a letter (e.g. L) the pulleys pitch/belt cross section and a 2 digit number (e.g. 12) the number of grooves, for example 100L12.

RPP TIMING BELTS RUBBER CHAIN

Description

The new RPP parabolic profile is deeper than the equivalent competitors standard tooth profile. The increased depth and sturdiness of the tooth results in an increased torque transmission capability and reduced interference during meshing.

The recess in the top of the tooth allows local deformation of the belt when meshing with the pulley, and this contributes to the ability to absorb shock loads and reduced interference during meshing. Other benefits include a reduction in transmission noise, an increase in tooth jump resistance, an increase in power transmitted and an increase resistance to tooth shear. Part numbers are identified by a 3 or 4 digit number (e.g. 960) which represents the pitch length in mm, a number and letter (e.g. 8M) the belts pitch and a 2 or 3 digit number (e.g. 30) the belts width. 960-8M-30 etc.

Belt type	Pitch	β	h_s	h_t
3M	3mm	32°	2.40	1.15
5M	5mm	32°	3.80	2.00
8M	8mm	32°	5.40	3.46
14M	14mm	32°	9.70	6.10

RPP TIMING BELTS 'DD' RUBBER CHAIN

Description

The new RPP parabolic profile is deeper than the equivalent competitors standard tooth profile. The increased depth and sturdiness of the tooth results in an increased torque transmission capability and reduced interference during meshing. The recess in the top of the tooth allows local deformation of the belt when meshing with the pulley, and this contributes to the ability to absorb shock loads and reduced interference during meshing. Other benefits include a reduction in transmission noise, an increase in tooth jump resistance, an increase in power transmitted and an increase resistance to tooth shear.

Part numbers are identified by a 3 or 4 digit number (e.g. 960) which represents the pitch length in mm, a number and letter (e.g. 8M) the belts pitch and a 2 or 3 digit number (e.g. 30) the belts width. 960-8M-30 DD etc.

Belt type	Pitch	β	h_s	h_t
8M	8mm	32°	5.40	3.46
14M	14mm	32°	9.70	6.10

RUBBER CHAIN BLUE

The new **DUNLOP** Rubber Chain Blue can really be considered as a reliable, lower maintenance and economical alternative to the drive systems equipped with chains and gears.

Thanks to its state of the art materials, these belts are particularly recommended for efficient, compact drives which experience high torque loading and permit the designer much greater flexibility by means of the following advantages.

More than 110% power rating compared to the standard rubber chain white.

Uses existing pulleys, which maintains functional interchangeability with other deep profile systems as HTD.

Allows existing systems to be upgraded without the necessity to replace the pulleys.

DUNLOP Rubber Chain Blue is one of the quietest drive belt systems available on the market today.

In addition to this it has the extra advantages of:

Further reduction of noise by reduced belt widths due to the higher performance rating of the system.

Low noise characteristics compared to drive systems using polyurethane, steel etc. due to the rubber construction.

Use of smaller pulleys creates lower belts speeds and thereby less noise.

STRUCTURE

The new **DUNLOP** Rubber Chain Blue is constructed with materials of the highest quality and strength. Extensive development performed by Research & Development has resulted in superior torque capacity.

THE BELT BODY

It is formed by an innovative compound. This cross linked elastomer increases resistance to tooth shearing up to 15% in comparison to the previous belts. This compound guarantees an exceptional level of resistance to flex fatigue preventing the appearance of cracks and is formulated also to better resist mineral oils, heat and ozone actions.

TENSION MEMBERS

The glass fibre tensile members are the load carrying element, thanks to the excellent characteristic of this cord the new **DUNLOP** Rubber Chain Blue has a superior tension stability in static and dynamic conditions.

TOOTH FABRIC

A hard wearing nylon fabric is bonded to the tooth surface to improve torque carrying capacity. In addition a special graphite impregnation process transfers self lubricating action and increases belt efficiency.

FEATURES

An improved belt performance results from the adoption of this system, which can be summarised as follows.

- Better tension stability
- Longer life resistance
- Higher power performance
- More compact and lightweight drives with same power rating
- Exceptional resistance to abrasion and tooth shear
- Temperature range -25°C to + 80°C

RPP TIMING BELTS RUBBER CHAIN BLUE

Description

The new RPP parabolic profile is deeper than the equivalent competitors standard tooth profile. The increased depth and sturdiness of the tooth results in an increased torque transmission capability and reduced interference during meshing. The recess in the top of the tooth allows local deformation of the belt when meshing with the pulley, and this contributes to the ability to absorb shock loads and reduced interference during meshing. Other benefits include a reduction in transmission noise, an increase in tooth jump resistance, an increase in power transmitted and an increase resistance to tooth shear.

Part numbers are identified by a 3 or 4 digit number (e.g. 960) which represents the pitch length in mm, a number and letter (e.g. 8M) the belts pitch and a 2 or 3 digit number (e.g. 30) the belts width. 960-8M-30 etc.

Belt type	Pitch	β	h_s	h_t
5M	5mm	32°	3.80	2.00
8M	8mm	32°	5.40	3.46
14M	14mm	32°	9.70	6.10

RUBBER CHAIN YELLOW

DUNLOP Rubber Chain Yellow belt system can be used in virtually timeless range of industry applications where a high torque synchronous drive is required. The new rubber chain yellow timing belt is constructed with the highest quality materials.

The bonded strength of all components guarantees superior torque capacity. The new materials join forces to achieve the highest standard of quality and performance in the industry.

STRUCTURE

PRECISION GROUND RUBBER BACKING

Precision ground neoprene rubber backing is designed for maximum resistance to engine oil, grease, heat build up, sunlight and flex fatigue. Excellent for backside idlers.

TENSION MEMBER

The fibreglass cord is the load carrying element in the new **DUNLOP** Rubber Chain Yellow belt.

This excellent characteristic of the cord guarantee incomparable tension stability both in static and dynamic conditions when compared with other aramid reinforced belts.

This characteristic can eliminate any kind of re-tensioning procedure, providing a real maintenance free operation and guarantee a perfect tooth meshing reducing abrasion, vibrations and noise.

TOOTH FACING FABRIC

Hard wearing nylon fabric is bonded to the tooth surface to improve torque carrying capacity. The external fabric surface is impregnated with a special graphite, providing a self lubrication feature which

increases the efficiency of the drive while providing:

- Exceptional resistance to abrasion and tooth shear due to the low coefficient of friction.
- Increased drive efficiency.
- Increased belt and pulley life.

BELT BODY

It's an innovative compound. The elastomer increases resistance to tooth shear up to 15% in comparison to the previous belts. The compound guarantees an exceptional resistance to flex fatigue. According to the standards ASTM D318 the flexibility test shows an improvement in the flex fatigue resistance up to 500 times more than the previous version. Furthermore this compound is formulated to show considerable resistance to mineral oil, heat and ozone.

With a higher tensile strength (10-20%) than the previous belt and with the superior flexibility of the new rubber chain yellow belt enables us to offer smaller, more compact drive systems thus offering tighter weight, higher performances and improved drive efficiency.

FEATURES

DUNLOP Rubber Chain Yellow systems offer drive energy efficiency up to 98%. This results in a reduction of energy consumption as much as 5% over other power transmission systems.

- Upgrade of the existing transmission without changing the pulleys.
- Perfect interchangeability with parabolic pulley profile RPP and HTD.
- Quiet, maintenance free operation.
- Better tooth jump resistance.
- Excellent for backside idlers.
- Superior Antistatic Properties conforming to the BS 2050.

- Belts require no special handling or storage considerations. The resulting dimensional stability assures consistent, reliable performance.
- Temperature range -25°C to + 80°C

RPP TIMING BELTS RUBBER CHAIN YELLOW

Description

The new RPP parabolic profile is deeper than the equivalent competitors standard tooth profile. The increased depth and sturdiness of the tooth results in an increased torque transmission capability and reduced interference during meshing. The recess in the top of the tooth allows local deformation of the belt when meshing with the pulley, and this contributes to the ability to absorb shock loads and reduced interference during meshing. Other benefits include a reduction in transmission noise, an increase in tooth jump resistance, an increase in power transmitted and an increase resistance to tooth shear.

Part numbers are identified by a 3 or 4 digit number (e.g. 960) which represents the pitch length in mm, a number and letter (e.g. 8M) the belts pitch and a 2 or 3 digit number (e.g. 30) the belts width. 960-8M-30 etc.

Belt type	Pitch	β	h_s	h_t
8M	8mm	32°	5.40	3.46
14M	14mm	32°	9.70	6.10

RUBBER CHAIN RED

DUNLOP proudly introduces the new Rubber Chain Red timing belt drive, the latest development in high performance systems. It significantly improves the traditional specific power capacity and offers new application opportunities against alternative systems like gears or chains which always have a disadvantage in terms of weight, noise, lubrication and maintenance costs.

The new **DUNLOP** Rubber Chain Red is a rubber based timing belt, which solves the problems related to steel and aramide cords, thanks to the development and usage of its innovative 'Dual Core' hybrid cord technology. Rubber chain red reaches the highest level of performances incorporating this cord in a new rubber matrix and covering the teeth with a special and unique heavy fabric.

STRUCTURE

THE BELT BODY.

An innovative design and blend of HNBR elastomer's, uniquely cross linked to increase teeth rigidity and shear resistance, up to +25% in comparison to rubber chain yellow belts. Despite the high levels of rigidity and hardness, this compound guarantees and exceptional resistance to flex fatigue, preventing the appearance of cracks when working with very small pulleys.

Tests made have showed an incredible improvement in the flex fatigue resistance up to 10 times more than the previous rubber chain yellow version, running on the smallest pulley diameters under the same load conditions.

Furthermore this compound is formulated to considerably resist the effects of mineral oils (test conditions 22h at 100°C in ASTM3 oil; -25% less absorption than rubber chain yellow), offering an incredible wide range of working temperatures: from -35°C to +115°C.

TENSION MEMBERS.

The tensile member is made from an innovative 'Dual Core' hybrid cord technology and it constitutes the load carrying elements inside the new rubber chain red belt. The 'Dual Core' technology gives excellent characteristics to this cord, which grant extreme dimension stability under static and dynamic tensions, together with a superior flex fatigue resistance. These performances can eliminate any kind of re-tensioning procedure, providing a maintenance-free operation and guarantees a perfect tooth meshing for longer service life with a reduction of abrasion, vibrations and noise.

TOOTH FACING FABRIC.

A hard wearing poly-amide fabric is bonded to the tooth surface, to improve torque carrying capacity and tooth shear resistance. Its special surface impregnation process confers self lubricating properties, a lower friction and increased drive efficiency.

FEATURES

Thanks to the innovative materials used, rubber chain red is a reliable, lower maintenance and economical alternative to drive systems with chains and gears. It is particularly recommended for efficient, compact drives with high or pulse torque loads, offering:

- Increased basic power capacity by up to 40% compared to the current rubber chain yellow.
- Use existing pulleys, keeping a full functional interchange with other deep pulley profile systems, like HTD, etc.
- Allows existing drives to be upgraded without the necessity to replace the pulleys.
- Reduction of noise thanks to narrower belts due to the higher performance rating of the system.
- Low noise characteristics compared to drive systems using polyurethane, steel etc. due to the rubber matrix and its teeth with parabolic profile shape, recognised as the quietest system on the market.
- A wide, continuous range of possible operating temperature, like no other system, which makes rubber chain red the only solution for extreme working conditions.
- Temperature range -35°C to + 115°C

TIMING BELTS

RPP TIMING BELTS RUBBER CHAIN RED

Description

The new RPP parabolic profile is deeper than the equivalent competitors standard tooth profile. The increased depth and sturdiness of the tooth results in an increased torque transmission capability and reduced interference during meshing. The recess in the top of the tooth allows local deformation of the belt when meshing with the pulley, and this contributes to the ability to absorb shock loads and reduced interference during meshing. Other benefits include a reduction in transmission noise, an increase in tooth jump resistance, an increase in power transmitted and an increase resistance to tooth shear.

Part numbers are identified by a 3 or 4 digit number (e.g. 960) which represents the pitch length in mm, a number and letter (e.g. 8M) the belts pitch and a 2 or 3 digit number (e.g. 30) the belts width. 960-8M-30 etc.

Belt type	Pitch	β	h_s	h_t
8M	8mm	32°	5.40	3.46
14M	14mm	32°	9.70	6.10

TIMING BELTS

IMPERIAL TIMING BELTS

Description

Dunlop imperial timing belts are available with either single or double sided teeth, are manufactured using the most advanced technology available. Trapezoidal tooth profile and Polychloroprene teeth offer accurate meshing with the mating pulleys and this contributes to the ability to absorb shock loads and reduced interference. Fibreglass reinforcement for minimal elongation and a nylon fabric protects the tooth surface.

Part numbers are identified by a 3 or 4 digit number (e.g. 900) which represents the pitch length in inches i.e. 90", 1 or 2 letters (e.g. H) the belts pitch and a 2 or 3 digit number (e.g. 200) the belts width i.e. 2" for example 900H200.

IMPERIAL TIMING BELTS DD

Description

Dunlop imperial timing belts are available with either single or double sided teeth, are manufactured using the most advanced technology available. Trapezoidal tooth profile and Polychloroprene teeth offer accurate meshing with the mating pulleys and this contributes to the ability to absorb shock loads and reduced interference. Fibreglass reinforcement for minimal elongation and a nylon fabric protects the tooth surface.

Part numbers are identified by a 3 or 4 digit number (e.g. 900) which represents the pitch length in inches i.e. 90", 1 or 2 letters (e.g. H) the belts pitch and a 2 or 3 digit number (e.g. 200) the belts width i.e. 2" for example 900H200.

PU TIMING BELTS

DUNLOP PU Timing Belts are manufactured with a unique thermoset moulding process. The high-grade polyurethane gives excellent abrasion and shear resistance, combined with a variety of graded steel cords, ensuring high strength and tractive resistance. The result is a timing belt with excellent dimensional stability. DUNLOP moulded Timing Belts are manufactured to a tight tolerance range, which

ensures consistent length and thickness. The combination of these factors results in DUNLOP PU Timing Belts performing to the highest physical and chemical levels.

DUNLOP PU timing belts are suitable for high power, precision motion and control even with high speed.

FEATURES

These belts have the following features:

Mechanical features

- Consistent dimensional stability
- Low pre-tension
- Low noise
- High abrasion resistance
- Low maintenance
- High flexibility
- Linear speeds up to 80 m/sec

Chemical features

- Good resistance to aging, hydrolysis, UVA rays, Ozone
- Working temperature: -25°C to 80°C (up to +110°C for short periods)
- High resistance to oils, fats and greases.
- Good resistance to most acids and Alkalis.

DUNLOP PU Timing Belts perform especially well on light synchronised and stepped drives, in office automation and domestic appliance applications.

OPEN ENDED TIMING BELTS

DUNLOP PU open ended timing belts are manufactured to tight tolerances, they deliver reliability and excellent dimensional stability. The addition of a Nylon coating on the tooth and/or the back of the belt during production, enhances the running properties for specific applications. An extra thickness of polyurethane is also possible on the back of the belt, offering extra protection against aggressive of heavy products.

DUNLOP PU open ended timing belts can be supplied as

open length rolls, or as endless jointed belts.

Open ended belts are manufactured as continuous lengths, with the reinforcement in a parallel configuration. Standard roll lengths are 50 or 100 metres, other lengths are available on request.

DUNLOP PU open ended timing belts are normally used in linear motion drives.

JOINED TIMING BELTS

DUNLOP jointed belts are manufactured using the thermoplastic properties of the open length belt, endless belts can be produced to any length by welding.

The finished joint is resistant to fatigue from flexing and tension, due to the unique symmetrical V shaped pattern of the joint.

Endless jointed belts are suitable for conveying applications, particularly when indexing and/or positive drive is required. Supplementary application of flights, profiles and coatings is possible, to suit specific applications.

They are also available with alternative reinforcement cords such as Kevlar (K), High Flex (HF), High Performance (HP) and High Performance Flex (HPF).

TIMING BELTS

METRIC PITCH PU TIMING BELTS

Description

Dunlop metric pitch timing belts are available with either single or double sided teeth, are manufactured using the most advanced thermoset moulding processes available. The high grade polyurethane gives excellent abrasion and shear resistance, combined with a variety of graded steel cords, ensuring high strength is maintained.

Features include consistent dimensional stability, low pre-tension, low noise, high abrasion resistance, low maintenance, high flexibility, linear speeds up to 80 m/sec. good resistance to heat with a working temperature range of -25°C to +80°C and a good resistance to oils, fats and greases.

Part numbers are identified by a letter and number (e.g. T10) which represents the belts pitch, followed by 3 or 4 numbers (e.g. 810) the belts length in mm, and a 2 digit number (e.g. 50) the belts width, for example T10-810-50.

OPEN ENDED TIMING BELTS

Description

Dunlop Open Ended Timing Belts are manufactured in both rubber and thermoplastic polyurethane giving superior wear and abrasion resistance, specifically suitable for linear drives, accurate positioning and reversal drives. A high load capacity, low maintenance costs and very low noise levels, make open ended belts a perfect alternative to chain or cable linear drives.

Features include; Consistent dimensional stability, low pre-tension, low noise, high abrasion resistance, low maintenance, high flexibility, linear speeds up to 80 m/sec, high precision linear positioning.

Open ended rubber and polyurethane timing belts are produced in both straight and spiral cut options and are available in the following cross sections; 3M, 5M, 8M, XL, L, H, T5 & T10.

OPEN ENDED TIMING BELTS - RUBBER

TIMING PULLEYS

PULLEY IDENTIFICATION

Timing pulleys are indicated by a conventional code consisting of 3 groups. The first group shows number of teeth. The second group shows the pitch (stated at the beginning of each table). The third group shows the belt width for which the pulley has to be used:

XL, L, H, XH & XXH pulleys, the belt width is in hundred of an inch (100 = 1 inch)

HTD, T2,5, T5 & T10 pulleys the belt width is in mm.

PULLEY TOLERANCE DATA

Positive drive pulleys are manufactured according to:

DIN ISO 5294

DIN 7721

PULLEY BORE TOLERANCES

Normally pulleys are bored with H7 tolerance, if not otherwise specified.

LATERAL OSCILLATION

The pulley bore must be at right angles to the vertical faces of the pulley within 0,0254 mm for each 25,4 mm radius.

STANDARD PULLEYS

These pulleys have equally spaced grooves machined in to the outside diameter, to give correct meshing with the belts teeth. The pulley grooves are of a special design to give this correct meshing of the belt teeth with minimal friction.

All pulleys manufactured have correct minimum meshing tolerances built in and the pitch diameter is always larger than the outside diameter.

Timing pulleys are normally stocked in a wide range of diameters and number of teeth along with standard widths.

PROTECTIVE TREATMENT

Steel and Cast Iron Pulleys are black phosphated.

SPECIAL PULLEYS

Special pulleys can be manufactured to customer drawings. It is recommended that pulleys should be made of cast iron or steel. It is essential to use steel when the peripheral speed is over 30 m/s.

If weight is a limiting factor, pulleys can also be made in aluminium. However if aluminium is used the pulley will have a shorter life due to the lightly abrasive effect of the-nylon cover of the belt.

Hard-anodising of the teeth may extend pulley life.

Type	MXL	XL	L	H	XH	3 M	5 M	8M	14 M	T2.5	T5 AT5	T10 AT10	T20

TIMING PULLEYS

HTD TIMING PULLEYS TAPER BORE

Description

Dunlop HTD Timing Belt Pulleys are manufactured from either C45 steel with black oxide surface treatment, cast iron EN-GJL-200 and black phosphate or aluminium 6082. Pulley flanges are produced from S235JR steel.

HTD Timing Belt Pulleys are available to suit all HTD pitch sizes, 3M, 5M, 8M & 14M and are available from stock in both taper and pilot bore options.

Part numbers are identified by a 2 or 3 digit number (e.g. 44) which represents the number of teeth, a number and a letter (e.g. 8M) the pulleys pitch and a 2 or 3 digit number (e.g. 30) the width of the appropriate corresponding timing belt, for example 44-8M-30F.

TIMING PULLEYS

HTD TIMING PULLEYS PILOT BORE

Description

Dunlop HTD timing belt pulleys are manufactured from either C45 steel with black oxide surface treatment, cast iron EN-GJL-200 and black phosphate or aluminium 6082. Pulley flanges are produced from S235JR steel.

HTD timing belt pulleys are available to suit all HTD pitch sizes, 3M, 5M, 8M & 14M and are available from stock in both taper and pilot bore options.

Part numbers are identified by a 2 or 3 digit number (e.g. 44) which represents the number of teeth, a number and a letter (e.g. 8M) the pulleys pitch and a 2 or 3 digit number (e.g. 30) the width of the appropriate corresponding timing belt, for example 44-8M-30F.

TIMING PULLEYS

TIMING PULLEYS TAPER BORE (IMPERIAL)

Description

Dunlop imperial timing belt pulleys are manufactured from either C45 steel with black oxide surface treatment, cast iron EN-GJL-200 and black phosphate or aluminium 6082. Pulley flanges are produced from S235JR steel.

Imperial timing belt pulleys are available to suit all pitch sizes, XL, L, H & XH and are available from stock in both taper and pilot bore options.

Part numbers are identified by a 2 or 3 digit number (e.g. 44) which represents the number of teeth, one or two letters (e.g. XL) the pulleys pitch and a 3 digit number (e.g. 037) the width of the appropriate corresponding timing belt, for example 44-XL-037.

TIMING PULLEYS

TIMING PULLEYS PILOT BORE (IMPERIAL)

Description

Dunlop imperial timing belt pulleys are manufactured from either C45 steel with black oxide surface treatment, cast iron EN-GJL-200 and black phosphate or aluminium 6082. Pulley flanges are produced from S235JR steel.

Imperial timing belt pulleys are available to suit all pitch sizes, XL, L, H & XH and are available from stock in both taper and pilot bore options.

Part numbers are identified by a 2 or 3 digit number (e.g. 44) which represents the number of teeth, one or two letters (e.g. XL) the pulleys pitch and a 3 digit number (e.g. 037) the width of the appropriate corresponding timing belt, for example 44XL037.

TIMING PULLEYS

METRIC TIMING PULLEYS PILOT BORE

Description

Dunlop metric pitch timing pulleys are manufactured from aluminium 6082 and pulley flanges are produced from S235JR steel.

Metric pitch belt pulleys are available to suit all pitch sizes, T2.5, T5, T10, AT5 & AT10 and are available from stock with pilot bore, suitable for machining.

Part numbers are identified by a 2 digit number (e.g. 27) which represents the overall distance in mm through the bore, one or two letters and numbers (e.g. T5) the pulleys pitch and a 2 or 3 digit number (e.g. 32) being the number of teeth, for example 27T5/32-2.

Stainless Steel Roller Chain	168
Nickel Plated Roller Chain	168
Zinc Plated Roller Chain	169

ENGINEERING DATA

The main components of a roller-type transmission chain are shaped side plates, roller bearing pins and rollers. The distance between the centre of two pins determines the chains pitch.

Accessories available are connecting links and single or double offset links, to connect these parts to the chain, spring clips or alternatively cotter pins are required. Fig. 1 shows a chains pitch, Fig. 2 shows a spring clip connecting link, and Fig. 3 shows a cotter pin connecting link. Fig. 4 shows external and internal side plate alternation and Fig. 5 shows a single and a double offset-link.

British standard roller chains refer to the ISO/R 606-1982 (DIN 8187) while American standard roller chains refer to ANSI (DIN 8188). Chains are usually supplied in the most commonly requested pitches and are boxed and packed in 5 metre rolls or 50 metre coils, cut lengths of roller chain are available to customer length requirements.

LENGTH - The number of pitches is always odd.

CONNECTING LINK - The connecting link is used to connect and close the chain length into a ring, the number of pitches then become even.

OFFSET LINK - When an offset link is inserted, the number of pitches becomes odd, but the chain cannot close into a ring.

DESIGN CRITERIA

DESIGN CRITERIA continued

- 1) The centre-to-centre distance between the driving and driven wheels must allow the chain to wind around the driving wheel for a circle arc of at least of 120°.
- 2) Appropriate chain tension gives good transmission, it maybe necessary to use idler sprockets to maintain the chains tension.
- 3) As well as ensuring correct performance, lubrication prevents chain wear. The speed and dimensions of the chain are what dictate the type of lubrication required.

Chain example	Speed up to	System
3/8"	1 Mtr/sec	manual
1"	1 Mtr/sec	drop type
3/8"	2 Mtr/sec	drop type
1"	2 Mtr/sec	oil bath
3/8"	10 Mtr/sec	forced lubrication
1"	6 Mtr/sec	forced lubrication

4) Determination of the chain length (theoretical):

$$S_v = 2 \frac{l}{p} + \left(\frac{Z_1 + Z_2}{2} \right) + \left[\left(\frac{Z_2 - Z_1}{2\pi} \right)^2 \times \frac{p}{l} \right]$$

S_v = chain length

l = centre-to-centre distance

Z_1 = Driving wheel teeth

Z_2 = Driven wheel teeth

p = pitch

ROLLER CHAIN

ROLLER CHAIN DIN8187-ISO/R 606
Description

Roller chains are manufactured to internationally recognised standards. European standards refer to the ISO/R 606-1982 (DIN 8187) while American standards refer to ANSI (DIN 8188).

Roller chains are available in simplex (-1), duplex (-2) and triplex (-3) and in a varying range of materials and plating options, such as stainless steel (SS), nickel plated (NP) and zinc plated (ZP).

Attachments are also available along with connecting links (CL) and single (OL) and double (DOL) offset links.

SPROCKETS

SPROCKETS - PILOT BORE DIN8187-ISO/R 606
Description

Pilot bore sprockets are manufactured to internationally recognised standards. DIN8187-ISO/R 606 and are produced from C45 steel. They have a black phosphated finish to increase corrosion resistance so extending the sprockets working life. Conveniently stocked with a minimum pilot bore (dimension 'D') they can be machined to suit any suitable mounting requirement. Available from stock to suit British standard roller chains from 04B (6mm pitch) up to 32B (2" pitch) sizes in Simplex (single), Duplex (double) & Triplex (treble) rows of teeth. A full range of plate wheels are also available.

SPROCKETS

PILOT BORE SPROCKETS - CAST IRON

Description

Pilot bore sprockets are manufactured to internationally recognised standards. DIN8187-ISO/R 606. Cast Iron sprockets are produced from GG22 EN -GJL-200 UNI 1561 cast iron. They have a black phosphated finish to increase corrosion resistance so extending the sprockets working life. Conveniently stocked with a minimum pilot bore (see dimension 'D') they can be machined to suit any suitable mounting requirement. Available from stock to suit British standard roller chains from 06B (3/8" pitch) up to 32B (2" pitch) sizes in Simplex (single), Duplex (double) & Triplex (treble) rows of teeth.

PRE-BORED SPROCKETS + KEY WAY & GRUB SCREWS

Description

Pre-bored sprockets are manufactured to internationally recognised standards DIN8187-ISO/R 606 and are produced from C45 steel UNI EN 10083-1 having a minimum strength of 600 N/mm². They have induction hardened teeth to reduce tooth wear so extending the sprockets working life.

Conveniently held in stock in all popular metric bore sizes (dimension D), and corresponding key way that is located on the centre line of a tooth and 2 grub screws at 90° to each other for securing to a shaft. Available from stock to suit British standard roller chains from 06B (3/8" pitch) up to 16B (1" pitch) sizes in Simplex (single) row of teeth.

Key way dimensions according to bore diameter

D(H7)	B(H9)	T	M
10	4	D + 1,8 (+0,1 / 0)	M3
11	4	D + 1,8 (+0,1 / 0)	M3

SPROCKETS

PILOT BORE SPROCKETS - STAINLESS STEEL
Description

Stainless Steel pilot bore sprockets are manufactured to internationally recognised standards DIN8187-ISO/R 606 and are produced from 304L stainless steel.

Conveniently stocked with a minimum pilot bore (dimension 'D') they can be machined to suit any suitable mounting requirement. Available from stock to suit British standard roller chains from 06B (3/8" pitch) up to 16B (1" pitch) sizes in Simplex (single) row of teeth.

06B Chain
3/8" x 7/32"

Pitch: 9.525mm
 Internal width: 5.72mm
 Roller dia: 6.35mm

Sprocket

Tooth radius: 10mm
 Radius width C: 1mm
 Tooth width h1: 5.3mm

08B Chain
1/2" x 5/16"

Pitch: 12.7mm
 Internal width: 7.75mm
 Roller dia: 8.51mm

Sprocket

Tooth radius r: 13mm
 Radius width C: 1.3mm
 Tooth width h1: 7.2mm

ROLLER CHAIN & SPROCKETS

DOUBLE SIMPLEX PILOT BORE SPROCKETS - STEEL

Description

Double simplex pilot bore sprockets are manufactured to internationally recognised standards DIN8187-ISO/R 606 and are produced from C45 steel UNI EN 10083-1 having a minimum strength of 600 N/mm².

Conveniently stocked with a minimum pilot bore (dimension 'D') they can be machined to suit any suitable mounting requirement. Available from stock to suit British standard roller chains from 06B (3/8" pitch) up to 16B (1" pitch) sizes for 2 Simplex (single) chains to run in opposite directions at the same time.

**06B Chain**
3/8" x 7/32"

Pitch: 9.525mm
Internal width: 5.72mm
Roller dia: 6.35mm

Sprocket

Tooth radius: 10mm
Radius width C: 1mm
Tooth width L: 5.3mm

**08B Chain**
1/2" x 5/16"

Pitch: 12.7mm
Internal width: 7.75mm
Roller dia: 8.51mm

Sprocket

Tooth radius r: 13mm
Radius width C: 1.3mm
Tooth width L: 7.2mm

ROLLER CHAIN & SPROCKETS

TAPER BORE SPROCKETS - STEEL & CAST IRON

Description

Taper bore sprockets are manufactured to internationally recognised standards DIN8187-ISO/R 606 and are produced from C45 steel UNI EN 10083-1 having a minimum strength of 600 N/mm² and GG22 EN-GJL-200 UNI 1561 cast iron. They have a black phosphated finish to increase corrosion resistance so extending the sprockets working life. Conveniently stocked with a taper bore to suit a standard taper bush that are pre-bored to suit both metric & imperial bore and key way sizes. Available from stock to suit British standard roller chains from 06B (3/8" pitch) up to 20B (1-1/4" pitch) sizes in Simplex (single), Duplex (double) & Triplex (treble) rows of teeth.

ROLLER CHAIN & SPROCKETS

IDLER SPROCKETS WITH BALL BEARING

Description

Idler sprockets are manufactured to internationally recognised standards DIN8187-ISO/R 606 and are produced from C45 steel UNI EN 10083-1 having a minimum strength of 600 N/mm². Conveniently stocked with an integral ball bearing fitted (dimension 'D' for bore size).

Available from stock to suit British standard roller chains from 05B (8mm pitch) up to 20B (1-1/4" pitch) sizes in Simplex (single) row of teeth.

05B-1 TO 20B-1

NB. All flexible inserts have an angular misalignment capacity up to 4 deg.

DUNFLEX couplings can accommodate simultaneous maximum misalignment in all planes without imposing undue loads on adjacent bearings and the excellent shock absorbing properties of the flexible insert reduce vibration and torsional oscillations. Inserts are available in natural rubber compounds for use in ambient temperatures of -15°C to +70°C and chlorophene compound should be used when fire resistance and anti-static (F.R.A.S) properties are required.

Maximum torque figures should be regarded as short duration overload ratings for use in such circumstances as direct-on-line starting.

HRC COUPLING ENGINEERING DATA

HRC Couplings - These semi elastic couplings designed for general use purpose use, permit quick and easy assembly by means of Taper Lock bush fixing. Fully machined outside diameters allow alignment by simple straight edge methods. Shaft connection is 'fail safe' due to interacting dog design.

COUPLINGS

DUNFLEX COUPLINGS

Description

DUNFLEX coupling flanges are available in either F (Taper Bush fits inside) or H (Taper Bush fits outside) or pilot bored (PB) which can be bored in house to the required size. They can accommodate simultaneous misalignment without imposing undue loads on adjacent bearings, they have excellent shock absorbing properties that reduces vibration and torsional oscillation. Inserts are available in either natural rubber for use in ambient temperatures between -50°C & +50°C or chloroprene rubber for use in temperatures between -15°C and +70°C fire resistance and anti-static properties (F.R.A.S).

Notes.

G = Wrench clearance needed to allow for the tightening or loosening of the bush on the shaft as well as the flange clamping screws.

E = Half the distance required between flanges faces.

= Weight and inertia figures are for a single flange including mid range bore, clamping ring, screws and half of an insert.

COUPLINGS

HRC COUPLINGS

Description

HRC coupling flanges are available in either F (Taper Bush fits inside) or H (Taper Bush fits outside) or pilot bored (PB) which can be bored in house to the required size. These semi-elastic couplings are designed for general purpose use, they permit quick and easy assembly by means of taper bush fixing to the mating shaft.

Inserts are available in either natural rubber for use in ambient temperatures between -50°C & $+50^{\circ}\text{C}$ or chloroprene rubber for use in temperatures between -15°C and $+70^{\circ}\text{C}$ fire resistance and anti-static properties (F.R.A.S.).

HRC Assembly

F Flange (Taper Bore)

H Flange (Taper Bore)

B Flange (Pilot Bore)

COUPLINGS

JAW COUPLING

Description

Jaw coupling flanges are available either pilot bored (PB) which can be bored in house to the required shaft size they are also conveniently held in stock in all popular metric and imperial bore sizes with corresponding key way and 2 grub screws at 90° to each other for securing to a shaft.

They suit general purpose applications that cater for misalignment, shock loads and damp out small amplitude vibrations.

Angular misalignment capacity up to 1 deg.

Parallel misalignment capacity up to 0.38mm

Mass is for a complete coupling with a pilot bore

Nitrile insert temperature range -40°C to 100°C

COUPLINGS

RIGID COUPLING DATA

Description

Taper Bore Rigid Couplings provide a convenient method of rigidly connecting ends of shafts. These couplings have a male and female flange fully machined. The male flange can have the taper bush fitted from the Hub side (H) or from the Flange side (F), the female flange always has the bush fitting (F).

This gives two possible coupling assemblies (HF) and (FF). When connecting horizontal shafts, the most convenient assembly should be chosen. When connecting vertical shafts use assembly (FF) only.

HUBS & ADAPTORS

WELD ON HUBS

Description

Taper Bore Weld-on-Hubs are made out of steel, drilled, tapped and tapered bored to receive standard Taper Bushes. The extended flange provides a convenient means of welding hubs into fan rotors, steel pulleys, plate sprockets, impellers and other devices which must be firmly fastened to the shaft.

Weld-on-Hubs are easy to install and entirely suitable for use where severe operating conditions are met. Weld-on-Hubs are manufactured to complement the Taper Bush range. All are manufactured from C45 Steel.

HUBS & ADAPTORS

BOLT ON HUBS

Description

Taper Bore Bolt-on-Hubs are designed for use with the universally accepted Taper Bush. They provide a convenient means of securing fan rotors, impellers, agitators and other devices which must be fastened firmly to shafts.

Bolt-on-Hubs, type BF and SM, complete the range. They are manufactured from GG22 cast iron and are phosphated for extra rust protection.

BF Bolt-on-Hub

HUBS & ADAPTORS

ADAPTORS

Description

Taper Bush Adaptors are used with mating components that have a parallel bore, allowing them to take a standard Taper Bush that is pre-machined with the required bore and key way size.

This added convenience removes the need to drill, tap and taper-bore.

TAPER BUSH ADAPTORS

Hub Type	A	B	Key Section
1008PM	22	45	-
1008KM	22	45	5 X 5
1210PM	25	60	-
1210KM	25	60	6 X 6
1610PM	25	70	-
1610KM	25	70	10 X 8
2517PM	45	105	-
2517KM	45	105	16 X 10
3030PM	76	130	-
3030KM	76	130	20 X 12

MINIMUM DIAMETERS OF TAPER BORED HUBS

The following table shows the recommended minimum diameter in mm for bespoke component hubs that are to be drilled, tapped and taper bored for use with Dunlop Taper bushes. All standard Dunlop Taper bushes are tested to ensure that they are capable of safely containing the radial and circumferential hub stresses generated by the wedging mechanism which makes Taper bushes the equivalent of a shrink-on fit.

TAPER BUSH	MINIMUM HUB DIAMETERS (mm) FOR VARIOUS MATERIALS			
	TENSILE STRENGTH N/mm ²			
	CAST IRON 180	CAST IRON 250	STEEL 420	STEEL 600
1008	62	54	51	47
1108	64	57	54	50
1210	104	86	78	69
1610	109	92	85	78
1615	90	81	77	73
2012	121	106	99	92
2517	130	119	113	108

AVERAGE SLIP TORQUES FOR TAPER BUSH FIXING

The following table shows average slip torque values in Nm for each basic Taper bush size with a variety of common metric bore diameters. The values assume that the assembly uses a Dunlop Taper bush fitted in accordance with the instructions supplied with every bush to a hub prepared to the Dunlop specification. With a key, the slip tendency transfers to the bush/hub interface at a greater torque value related to the ratio of bush outer dia to bore dia.

	100	5650
	125	7370

Large bores marked* are only available in bush sizes marked*

TO INSTALL

- Remove the protective coating from the bore and outside of bush and bore of hub. After ensuring that the mating tapered surfaces are completely clean and free from oil or dirt, insert bush in hub so that holes line up.
- Sparingly oil thread and point of grub screws, or thread and under head of cap screws. Place screws loosely in holes threaded in hub, shown thus  in diagram.
- If a key is to be fitted place it in the shaft keyway before fitting the bush. It is essential that it is a parallel key and side fitting only and has TOP CLEARANCE.
- Clean shaft and fit hub to shaft as one unit and locate in position desired, remembering that bush

will nip the shaft first and then the hub will be slightly drawn on to the brush.

- Using a hexagon wrench tighten screws gradually and alternately to torque shown in table below.
- Hammer against large-end of bush, using a block or sleeve to prevent damage. (This will ensure that the bush is seated squarely in the bore). Screws will now turn a little more. Repeat this alternate hammering and screw tightening once or twice to achieve maximum grip on the shaft.
- After drive has been running under load for a short time stop and check tightness of screws.
- Fill empty holes with grease to exclude dirt.

TO REMOVE

- Slacken all screws by several turns, remove one or two according to number of removal holes shown thus  in diagram. Insert screws into removal holes after oiling thread and under head of cap screws.
- Tighten screws alternately until bush is loosened in hub and assembly is free on the shaft.
- Remove assembly from shaft.

Removal holes

TAPER BUSHES

TAPER BUSHES

Description

Dunlop Taper Bushes are the most convenient and cost effective method of fixing components to a mating shaft without using any special tools. Taper Bushes are pre-machined with the required bore & keyway size and are supplied complete with locking set screws, thus making savings in time and cost on any machining process. They are available with both metric or imperial bore and keyway size options. Taper Bushes are designed for use with V-Pulleys, Chain Sprockets, Micro V-Pulleys, Timing Belt Pulleys, Couplings, Weld-On & Bolt-On Hubs. Part numbers are identified by a 4 digit number (e.g. 1610) which represents the taper bush series followed by the bore size (e.g. 28mm) for example 1610x28mm.

TECHNICAL INFORMATION

The functioning principle of the articles presented is based on radial deformation of the items, made up of a truncated cone section: the tightening torque applied to the connecting screws causes an axial movement of the parts in contact with each other and in function of the inverse cone shape and the longitudinal cuts made on them provokes an increase in the diameter (of the external ring) and a reduction of the diameter (of the internal ring).

This changes allows (by virtue of the specific pressure between the bodies in contact) transmission of the torque between the shaft and the part connected to it (gear, timing belt pulley, V-Belt pulley or other specific parts).

- The advantages of the system block are as follows:
- Elimination of play between the shaft and the part driven.
- Uniform distribution of the load over the entire diameter
- Facility of synchronisation between the various possible parts connected as a set
- Reduction of the diameter (of project) of the drive shaft
- Increase of the resistant section of the drive shaft
- Reduction of the procurement times for machine assembly
- Maintenance facilitated with no need to stop the machine
- Availability of spare parts by main sub-suppliers of technical equipment

TAPER BUSH LOCKING DEVICE

TAPER BUSH LOCKING DEVICE

Description

Taper Bush Locking devices are precision made to provide a wide, versatile range of keyless shaft/hub fixing assemblies. Their design is such they can be fitted to any mating component that has a parallel bore.

They offer simple installation, resistance to alternating torques, increased shaft strength, zero backlash, actual and angular adjustment therefore creating high torque transmission capacity.

Idler Sprocket Sets	248
Idler Roller Pulley Sets	249

TENSIONING TECHNOLOGY

Chain & V-Belt Tensioning

Roller chains are power transmission components with positive transmission which, by virtue of their design are subject, depending on quality, to elongation as a result of wear of 1 to 3% of their total length. In spite of this elongation, due to aging, a roller chain transmits the occurring torques effectively providing it is periodically retensioned. Without tension adjustment, the slack side of the chain becomes steadily longer, oscillates and reduces the force transmitting wrap angle of the chain on the sprockets.

The chain no longer runs smoothly off the teeth of the sprockets, producing uneven running of the entire drive and supporting wear. The service life of the chain drive can be extended considerably by the use of an automatic chain tension adjuster. The tensioning element prevents the slack side of the chain from 'sagging' or 'slapping' by its automatic operation and very wide tensioning range for compensating this given elongation.

The DUNLOP tensioning element is based on the rubber spring principle. According to application it is supplemented with the appropriate idler sprocket for chain drives or with a belt roller pulley in belt tensioner applications.

Pre-tensioning

With the tensioning element the necessary travel and simultaneously the corresponding initial tension force can be accurately adjusted by a torsion angle scale and indicating arrow. Excessive initial pretensioning of the chain should be avoided in order to reduce the tensile force and surface pressure on the links.

Vibration Damping

The DUNLOP tensioning element, based on a system of rubber springs, absorbs considerably the chain vibration due to internal molecular friction in the rubber inserts. The rubber spring effectively absorbs the vibrations, resulting from the polygon effect, which also positively influences the noise level of the complete chain drive.

INSTALLATION

The idler sprocket is installed in arm position 'normal' or 'hard' in the required position and secured with the supplied nuts.

The laterally adjustable bearing on the thread permits simple and rapid adjustment of the idler sprocket to the chain track. The central fixing of the tensioning element with a single screw saves a great deal of time in installation. In addition, only one fixing hole is required on the 'machine side'.

On smooth, clean and torsionally rigid surfaces the resistance of the frictional contact between the tensioner housing and the machine element is a multiple of the maximum initial tensioning torque at 30°.

TENSIONER TYPE SE

The tensioning element with the specification SE (SE 11 to SE 45) is the mostly used standard unit for tensioning all kinds of chain and belt drives. This unit is designed for applications in temperature range from -40°C to +80°C.

Dunlop Idler Sprocket Set Type N

The DUNLOP idler sprocket set completes the tensioning element for applications in chain drives. The idler sprocket runs on a self-lubricating ball bearing Type 2 Z.

Dunlop Idler Roller Pulley Set Type R

The DUNLOP idler roller pulley set installed on the relevant SE unit is an ideal belt tensioner. The roller is made of high quality industrial plastic material with two self lubricating ball bearings Type 2 Z.

GENERAL INFORMATION

DUNLOP tensioners should be installed on a stiff, even and clean machine part means of the central bolt. The frictional connection on flange is usually fully sufficient for final positioning. The positioning notch on flange can be used to assure the tensioner additionally on uneven and dirty surfaces by setting a roller pin.

Tensioning Force F

The tensioning force can be continuously adjusted. The max. pre tensioning angle is + 30° out of neutral position. Tensioning force table for types SE by using hole-position 'normal' for idler sprocket & idler roller pulley fixation.

Size SE	Pre-tension < 10°		Pre-tension < 20°		Pre-tension < 30°	
	F (N)	s (mm)	F (N)	s (mm)	F (N)	s (mm)
11	15	14	40	28	80	40
15	25	17	65	34	135	50
18	75	17	180	34	350	50

38	290	30	730	60	1500	87
45	500	39	1300	78	2600	112

Tensioning Force F

Table mentioning the tightening moment for the central screw (included in scope of delivery).

Thread Size	Quality 8.8
M6	10 Nm
M8	25 Nm
M10	49 Nm
M12	86 Nm
M16	210 Nm
M20	410 Nm

When fixing the idler sprockets and idler roller pulleys in arm position 'hard', the tensioning force will increase by about 25%.

Mounting Instructions

Normal Positioning

The DUNLOP tensioning elements are always positioned on the slack side of the chain. They should be fitted as close as possible to the big wheel and hide the chain from the outer side. The ideal positioning of the tensioning arm is nearly parallel to the chain drive.

Reversible Chain Drives

The tensioning elements must be placed on both sides of the chain. Due to the reversible function there results a much higher pressure on the load side than on the slack side of the chain. It is therefore advised to use oversized tensioning elements and a pretension angle of max 15°.

Chain Engagement

At least 3 teeth of the idler sprocket must engage into the roller chain when tensioning the chain for the first time. The minimum number of engaged sprocket teeth between the tensioning wheel and chain is 3.

Mounting

The chain tensioner must be adjusted in the axial and angular direction. The tensioning area should be nearly in parallel position to the chain and in the direction of the chain's drive. In case the chain drives are extremely long it is possible to fit several chain tensioners in order to obtain better tensioning and compensation.

V-Belt Tensioner - Outer Roller

Please refer to the instructions of the belt manufacturer for further information on the belt structure when mounting our DUNLOP belt tensioning elements with flat rollers on the back of the belt. Inner or outer tension rollers must be positioned as far away as possible from the next V-Belt pulley the belt is guided to.

V-Belt Tensioner - Inner Grooved Pulleys

V-Belt pulleys can be mounted as inner rollers at any position on the slack side of the V-Belt (for drives with long axial distances and a high level of vibration we recommend to use pulleys with deep grooves).

INSTRUCTIONS FOR BELT DRIVES

Selection of the adequate DUNLOP Tensioner size

Selection table mentioning the most conventional V-Belt types.

*General basic selection criteria:

$$F = F_i \cdot z \cdot 2$$

F Resulting tensioning force by a pre-tension angle of 20°.

F_i Initial operation test-force according guidelines of the belt manufacturer.

z Quantity of belts in drive.

2 Multiplier for the compensation of belt slippage and/or of centrifugal force generated on belt strands.

**required test-force for belt deflection of 16mm per 1000mm of centre distance. The relevant deflection by shorter or longer centre distance has to be interpolated accordingly.

TENSIONERS

BELT AND CHAIN TENSIONERS

Description

Tensioning devices SE are available for both roller chain and V-Belt applications.

A range of idler sprockets to suit standard roller chain pitch sizes from 06B-1 to 24B-1 are available.

A range of idler roller pulleys are also available to suit standard V and wedge belt sections from Z/SPZ to C/SPC. Both designs have 2Z bearings fitted to the bore.

MOTOR BASES

Description

The fastest and most economical method of securing motors to machine beds. The five sizes are manufactured from galvanised steel and they can accommodate motor frame sizes 63 to 180. They have four slotted holes for fastening the base to the foundation.

Motor base range from SL210 to SL490.

Specification

The fastest and most economical method of securing motors to machine beds. The five sizes are manufactured from galvanised steel and they can accommodate motor frame sizes 63 to 180. They have four slotted holes for fastening the base to the foundation.

Alignment

The pressed top plate is designed to slide over the base plate preventing vibration and noise whilst ensuring continuous belt alignment. Belts are tensioned by adjusting a single screw.

Motor Mount

The motor is bolted to the two piece top plate which accomodates a wide range of motors. Centre distance adjustments can be made without the need to loosen the motor bolts.

SHAFT COLLAR

SHAFT COLLARS METRIC

Description

Bore tolerance: + .050mm to + .012mm

Width tolerance: + .076mm to - .254mm

Materials

Steel: 230M07PB zinc plated 'Trivalent'

Stainless steel: 303

Temperature range: +5°C to 180°C

Additional sizes are available.
